HW 7 Image Sharing

Assignment 7 was a lot harder due to the fact that I was late with hw 6 and barely had time for this assignemnt. I had to constantly upload my program to cyberduck in order to actually test the PHP portion like I did with previous assignments. I started the assignment the way he wanted me to by checking the table and databases then implementing the rest. I went to the websites provided by the professor to get some ideas on how to do this assignment and seen how some have done it. The program site is a very basic site from a bootstrap I grabbed and altered. I had error in my code and had to test the errors in my code to see where I could have went wrong which is why you see a lot of echo and exit functions. This assignment felt really rushed and I did not have much time to do anything to it. I used W3schools.com in order to understand what I was doing with some parts . I also had my uncle help me understand with the site again due to the amount of time I have to work at the hotel. I spent a few days doing the assignment and checking it for errors. I seen the final touch to the website and was not please with it too much. I will be changing a lot in hw 8 to make it a lot more visually pleasant.. I tested this particular program on google chrome and it was running perfectly fine. The task that was most time consuming was creating some functions but the examples that the professor gave us gave me a lot of help with this assignment. I am working a full time job now due to emergencies that has happened and am having a hard time completing these assignments.
